

## Outline

- Neodymium magnets combined with wind turbines will be a more efficient way for creating energy than burning fossil fuels, building dams, and using natural gases.
- In Islam keeping the earth clean is a great part of our religion. therefore even our prophet (PBUH) says that if the day of judgment is about to be established and you were holding a palm shoot, take advantage and plant it.
- Our earth has a vast majority of Neodymium magnets. We can substitute them into the wings of the turbines and they will continuously be trying to connect to the other wing, therefore generating electricity.
- Neodymium magnets are not like other earth rocks. They won't just be a one time use for us. Scientists say that one neodymium magnet can last from 1,000 to 1,000,000 years. They will provide us with their magnetic source for centuries, that is much longer than the maximum human life.
- Even the Quran says "it is Allah who made for you the earth a place of settlement and the sky a ceiling and formed you and perfected your forms and provided you with good things. That is Allah , your Lord; then blessed is Allah , Lord of the worlds". This is a verse from the Quran, surah 40, ayah 64. It states how Allah (SWT) has bestowed this earth upon us. It is now our duty to take care of it, fulfill its requirements, and to stop corruption.
